What is the program?
Ten weeks of mentored, research-intensive activities in the field of Synthetic Biology

- Including nine weeks of hands-on research at the interface of biology, engineering, chemistry, math and physics in a Northwestern University laboratory
- Stipend, travel expenses, and room and board provided for all participants

Workshops, seminars, activities to strengthen related skillsets
- Communication, design, ethics, teamwork, and entrepreneurship

Who is eligible?
U.S. citizens, permanent residents and U.S. nationals are eligible

- We particularly encourage students with no or limited research experience, and those from colleges with no research opportunities to apply
- Freshmen and Sophomores preferred, though all undergraduates will be considered
- Majoring in engineering, chemistry, biology, biophysics, computer science and/or mathematics
- Available for at least 9 weeks during the summer of 2021

How do I apply?

- Application opens December 2020
